# Deliverable 1.1: Communication and collaboration platform

During the first three month of the ESSnet Smart Surveys a confluence page was created.

<https://webgate.ec.europa.eu/fpfis/wikis/pages/viewpage.action?spaceKey=EstatBigData&title=ESSnet+Smart+Surveys+2020-2021>

The page is divided into a public and a restricted area:

**Public area:** The area is open for viewing to all but with managed editor rights reserved for project participants; it serves both as a collaboration platform for project members, and as an extranet for disseminating progress and results.

The screenshot shows the Confluence page for 'ESSnet Smart Surveys 2020-2021'. The left sidebar contains a navigation menu with sections like 'Seiten', 'Kalender', 'BEREICHVERKNÜPFUNGEN', and 'SEITENHIERARCHIE'. The main content area is titled 'ESSnet Smart Surveys 2020-2021' and includes a description of smart surveys, a list of project documents, and a list of project participants. The page is marked as 'Trusted Smart Surveys' and includes a warning that the content is restricted to project members.

**Restricted area:** This area is restricted to project participants. The restricted area will be used for confidential information such as personal or financial information.

The screenshot shows the same Confluence page but in a restricted view. The left sidebar is identical. The main content area is titled 'Project information' and includes sections for 'Project documents', 'Templates', 'Partners and participants', 'Financial information', and 'Coordination Group meetings'. The page is marked as 'Restricted' and includes a warning that the content is only accessible to project members. At the bottom, there is a comment box with the text 'Schreiben Sie einen Kommentar...'.

## Deliverable 1.2: CROS platform

Additionally a CROS Portal entry page was created.

[https://ec.europa.eu/eurostat/cros/content/essnet-smart-surveys\\_en](https://ec.europa.eu/eurostat/cros/content/essnet-smart-surveys_en)

The CROS Portal entry page only consists of a short introductory text about Smart Surveys and the ESSnet and links to the content of the confluence page.

The screenshot shows the CROS (Collaboration in Research and Methodology for Official Statistics) portal. The header includes the European Commission logo, the CROS logo, and a search bar. Below the header is a navigation bar with links to 'A TO Z', 'GROUPS', 'EVENTS', 'NEWS', 'HELP', and 'MY CROS', along with a 'Log in (via EU Login)' button. The main content area is titled 'ESSnet Smart Surveys' and features a sidebar on the left with the text 'Trusted Smart Statistics - Towards a European platform for Trusted Smart Surveys' and a link to 'ESSnet Smart Surveys'. The main text area contains the title 'ESSnet Smart Surveys (2020-2021)' and a paragraph explaining the concept of smart surveys and the goal of the ESSnet Smart Surveys project. It also includes a link to further information on the confluence page and a footer with social media links for E-mail, Facebook, Twitter, and LinkedIn.

### ESSnet Smart Surveys

**Trusted Smart Statistics - Towards a European platform for Trusted Smart Surveys**

[ESSnet Smart Surveys](#)

#### ESSnet Smart Surveys (2020-2021)

The term smart surveys has been used to refer to surveys based on smart personal devices, typically the smartphone. Smart surveys involve (continuous, low-intensity) interaction with the respondent and with his/her personal device(s). They combine (inter)active data provided explicitly by the respondent (such as responses to queries, or shared images) together with passive data collected in the background by the device sensors (e.g. accelerometer, GPS) on the same device or within other devices within the personal sphere of the respondent. The term trusted smart surveys refers to an augmentation of the smart survey concept by technological solutions aimed at increasing the degree of trustworthiness, hence promote public acceptance and participation. Constituent elements of a trusted smart survey are the strong protection of personal data based on privacy-preserving computation solutions, full transparency and auditability of processing algorithms. For more details see Ricciato F., Wirthmann A. (2019): [Trusted Smart Statistics: how new data will change official statistics](#).

The overall goal of the ESSnet Smart Surveys is to define the specifications for a European Platform supporting the use of shared smart survey solutions and furthermore to assess the usage of applications for European social surveys, such as the Time Use Survey (TUS) or the Household Budget Survey (HBS).

Further information on the ESSnet Smart Surveys can be found on confluence:
